2015

PROJECTS

Personal Drive —

- The goal of this project was to implement a full-stack drive web app that allows users to add and remove data to their personal drive on a website.
- ReactJS was used to create the front-end, while the items are stored in a MongoDB database. The back-end API was created using the Express framework and Multer was used for storing.

[Deployment](#) [GitHub](#)

Recipe Saver —

- This project is a web app that allows users to save their recipes.
- The front-end was created using ReactJS, while the back-end was built with Node.js and Express.js. The data is stored in a MongoDB database.

[Deployment](#) [GitHub](#)

Post-it —

- This project is a posting web app that allows users to create and like posts.
- The front-end was created using ReactJS, while Firebase was used for the back-end to store data and handle authentication.
